

Shedding Contamination is Cleared by Nano-Soma

by Garry Anderson, 19 July 2023

INTRODUCTION

With the introduction of CV-19 Spike Protein, HydroGels, Lipid Nano-Particles, PEGs, and the so-called CV-19 “Vaccination” into the population, there is concern about the contamination of “Non-Vaxxed” blood *via* “shedding” from Vaxxed people onto the “Non-Vaxxed” people.

HYPOTHESIS

To establish a base-line for future reference, the subject (Garry Anderson) undertook the task of taking regular samples of his blood for “Live Blood Analysis” by a qualified individual. The Subject has not been Vaxxed, avoids intimate contact with Vaxxed people, and has not exchanged any bodily fluids with anybody else.

Theoretically, the Subject’s blood should remain clear of contamination, however, sometime in March or April of the year 2023, there was a world-wide attempt to contaminate all “Non-Vaxxed” people in what appears to be a conspiratorial event by Governments, Politicians, Big Pharma, and the so-called “Global Elite”, *et al*, to contaminate the “Control Group” (the Non-Vaxxed people) in this world-wide experiment that is being conducted by those conspirators, so that no conclusions could be drawn about the damage caused by the so-called “Vaccination”. So, it now appears that the Subject’s attempts to remain a “Pure Blood” have been thwarted by the apparent Psychopaths’ trying to change mankind (a.k.a. humans) and play God.

From around the world, other people who had also been getting their own Live Blood Analysis, started reporting that the Non-Vaxxed blood started to look like Vaxxed blood. The March-April 2023 time frame reported by others around the world, is the same time-frame as when the Subject’s blood was contaminated, so the phenomena is world-wide requiring collusion and/or conspiracy between the parties involved.

Some possible causes are ‘Chemical Trail Spraying of Aerosols’, intentional contamination of the food supply (CV-19 like injections into livestock), possible contamination of the Red-Cross blood supply by mixing Vaxxed with Non-Vaxxed donations, possible contamination of Lidocaine (dental freezing), and the CV-19 Nasal Test Swabs that may have been be contaminated by the manufacturer.

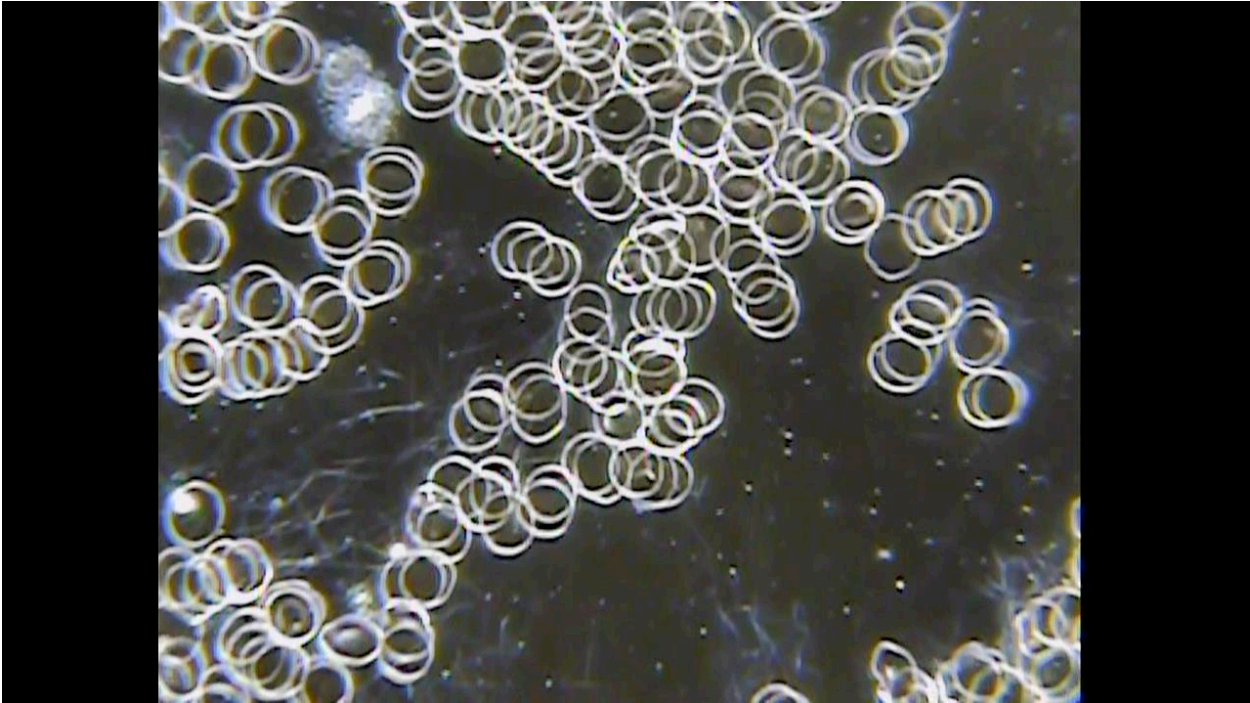

OBSERVATIONS

In January and February of 2023, the Subject’s blood was still clear of contamination, as may be observed in the following images. Later on, in March April, the Subject’s blood became contaminated by some unknown means. Many remedies were tried, but the **only one** that actually worked was the “[NanoSoma](#)” spray into the mouth 5 squirts every morning. The results showed that the contamination was gone, but a month after

stopping the NanoSoma product, the contamination had returned. See the following images:

CONCLUSIONS

From the Subject's personal experiment, it appears that NanoSoma gets rid of contamination in the blood for as long as the product is administered. At USD 60 per month for the product, the Psychopaths have created a "bonanza" for the manufacturer of the NanoSoma spray, and we wish more people knew about NanoSoma.

The Subject requests that other people around the world conduct their own NanoSoma experiment to see if they can reproduce these results. Make a Live Blood Analysis first, then administer NanoSoma for a month, then make another Live Blood Analysis to see if there are similar improvements.

Well done Psychopaths. When will you ever learn that evil does not pay? In the eyes of the Subject, you Psychopaths are all "fools".
